Mobile QA Assignment

Description

This assessment it to measure the candidate's knowledge with Git, test cases creation, test reporting and the ability to adapt with automation tools.

Application under test

A simple native Android application that shows a list of cities which you can search and when you choose a city the app shows a pin on a map. Then you can go back and repeat the process.

Prerequisites

- Git account
- Android Studio

Deliverables

To start, please access the following repo (https://github.com/m0bile-qa/mobile-test) pull the project and run the application.

1. Create a series of manual test cases that cover the **search** functionality
2. Automate (**at least one**) of the previously created test cases using Espresso
3. When the assignment is completed please push your changes to seperate branch and create a pull request to the master branch
4. Provide a test report for executed test cases
5. Provide an overall evaluation report for the application (issues, risks, recommendation … etc)
